

# Co-Dev: Unity AI Assistant Tool

**Version:** 1.0

**Author:** SuperHorizon Studios

**Target:** Unity Editor

**Purpose:** In-editor AI Assistant and Error Debugging Tool for Unity developers.

**Dependencies:** Unity 2020.3+ (Editor only), internet access, Gemini API Key (or any LLM API key).

---

## Overview

**Co-Dev** is a Unity Editor extension that integrates a conversational AI assistant into the Unity Editor. It enables developers to:

- Ask AI for help directly inside Unity.
  - Analyze and debug runtime and compile-time errors.
  - Manage and revisit chat sessions.
  - Send source code for optimization/refactoring.
  - Easily copy and reuse AI responses.
  - Asset Pin System
  - Folders can be pinned in a special tab
  - Folders and assets can be added in Quick Access
  - You can create tags to group up folders and assets
  - Better management (Grouped as ONE like UI , Core , data , multiplayer etc)
- 

## Features

### 🔗 Core Functionalities

| Feature                    | Description                                                            |
|----------------------------|------------------------------------------------------------------------|
| Ask AI                     | Type a prompt and receive an AI-generated response in seconds.         |
| Rich Text Responses        | Responses are formatted and fully copyable.                            |
| Error Debugging            | Send Unity errors (runtime or compile-time) to the AI for analysis.    |
| Session Save/Load          | Save your chat sessions as JSON and reload them later.                 |
| Clear History & Reset Chat | Reset the current conversation or clear the chat log.                  |
| API Key Management         | Securely save your AI API key using Unity's <code>EditorPrefs</code> . |

---

# How to Use Co-Dev AI

## Setup

1. Open Unity.
  2. Navigate to Co-Dev > Co-Dev Assistant.
  3. Set your **API key** under Co-Dev > API Key Setup.
- 

## Ask AI

- Enter a prompt in the "**Ask AI**" text box.
  - Click "**Ask AI**" to receive a response.
  - The AI response will appear formatted below, and is fully selectable and copyable.
- 

## Error Debugging

### Runtime Error Handling

- When a runtime error occurs in play mode, it is automatically cached.
- Click "**Analyze Last Runtime Error**" to send it to the AI for analysis and fix suggestions.

### Compile-Time Error Handling

- Last compile-time error is automatically logged.
  - Click "**Send Error to AI**" to get analysis and possible fixes.
  - Click "**Clear Last Error**" to reset the log.
- 

## Session Management

- **Save Session:** Saves the current conversation into a JSON file.
- **Load Session:** Load previous sessions via file browser.
- **Clear History:** Clears the current session data.
- **Reset Conversation:** Clears AI memory and session chat to start fresh.

# How to Use Co-Dev Pin and Custom System

## Setup

1. Open Unity.
2. Navigate to Co-Dev > pinned asset
3. Right click on any asset > pin asset / add to quick access

NOW open tabs like pinned folder and quick access and now you can access and asset from these tabs

You can tag the asset in the pinned Assets Tab and categorize them as per your continence

## Tips

- Use short, clear prompts for faster responses.
- Save chat sessions regularly to keep track of useful AI outputs.
- Use “Reset Conversation” to clear AI memory if context becomes inconsistent.
